Sustained Delivery of Ocular Therapeutics

OCR Number: OCR 4994

Description:

Sustained delivery of ocular therapeutics by injectable, degradable microparticles.

Advantages:

- Sustained and local delivery without the use of implants negates frequent administration and reduces side effects
- Polymer/drug interactions and degradation tailored to direct delivery profile
- Formulations to deliver both hydrophobic and hydrophilic drugs
- All drugs and polymers have been previously FDA-approved

Indications: Glaucoma, diabetic retinopathy, uveitis, AMD

Stage of Development: Small animal studies showed sustained release of timolol over 90 days, triamcinolone over 5 months and methotrexate over 35 days. Larger animal studies in progress.

Published/Issued Patents: PCT App. Pub. No. WO2009143288

Published/Issued Patents: U.S. App. Pub. No. 20110206773
