Immunogenic epitopes as targets for universal cancer vaccines
OCR Number: OCR 5120

Description:

- Unlike other vaccine-based technologies, OCR 5120 is not cancer-type specific, but a “pan-vaccine” antigen opportunity.
- The human immune system can respond to OCR5120 and identify the specific immunogenic epitopes derived from the OCR5120 antigen (see figure) as a matter of surveillance rather than response.
- OCR5120 target:
  - is important in self-renewal and maintenance of pluripotency in embryonic stem cells
  - is not cancer-type specific
  - is a “pan-vaccine” antigen
- Applications:
  - universal target for a general cancer vaccine
  - OCR5120-specific cellular preventive therapy for preventing cancer-like side effects arising from stem cell-based therapies
