Novel Cancer Biomarker and Target

OCR Number: OCR 6886

Description:

N6-methyladenine (N6-mA) inhibitors as cancer biomarkers

- N6-mA levels are significantly increased in aggressive forms of cancer, making it a powerful diagnostic marker.

- Dr. Xiao’s lab at Yale is developing chemical inhibitors against methyltransferases and readers of N6-mA and testing these inhibitors in biochemical assays and patient derived xenograft (PDX) mouse models.

- Several lead compounds have been identified. Medicinal chemistry optimization and large scale screen is in progress.

- **Intellectual Property**: Patent application has been filed

**PI**: Andrew Xiao
