Nanoparticles to Target the Pancreas

OCR Number: OCR 6785

Description:

Polymeric Bile Acid Formulations for Targeted Delivery

- A new class of polymer biomaterials (PUDCA) that are selectively taken up and retained in the pancreatic, hepatic and colon microenvironment.
- Formulated as orally administered, safe and biodegradable nanoparticles.
- Unique properties: encapsulates drugs and/or agents, pH-responsive, enables sustained release.
- Indications: targeted delivery of drugs and tracking/imaging agents to sites of pancreatic, hepatic and colonic inflammation. For therapy and diagnostic uses
- Innovator: Tarek Fahmy, Ph.D.
- IP status: PCT/US Application filed 62/214,648
- Publications: Unpublished work

FIG. Histology images of pancreatic sections from mice that were orally treated with PBS or PUDCA nanoparticles containing iron oxide (SPION-PUDCA). Iron Oxide is assayed using the Prussian Blue stain which appears distinct in the pancreas.
